Bachelorarbeit aus dem Jahr 2010 im Fachbereich Biologie - Zoologie, Note: 1, Leopold-Franzens-Universität Innsbruck (Zoologie), Sprache: Deutsch, Abstract: Die Blattschneiderameisen sind ein wichtiger Bestandteil des Ökosystems von neotropischen Regenwäldern. Sie sind wichtige Bestandteile des Nährstoffkreislaufs, durchlüften den Boden und können helfen die Artenvielfalt konstant zu halten. Zudem gelten sie als die dominantesten Herbivoren in den neotropischen Regenwäldern (Cherret et al., 1989). Sie gehören weltweit zu den höchst entwickeltesten sozialen Insekten, vor allem aufgrund ihres symbiontischen Pilzes, den sie in ihren Nestern als Nahrung züchten, aber auch aufgrund ihres vielschichtigen Kastensystems und der komplexen Arbeitsteilung. Ihre Nester können bei manchen Arten gigantische Grössen erreichen und aus Millionen von Individuen bestehen. Sie gehören zu den bestuntersuchteten Insekten der neotropischen Regenwälder. Ein Grund hierfür ist unter anderem, dass sie große Schäden an Plantagen verursachen, wodurch jährlich Ernten im Wert von mehreren Milliarden Dollar verloren gehen (Hölldobler u. Wilson, 1990). In der vorliegenden Arbeit soll ein grober Überblick über die Biologie und Lebensweise der Blattschneiderameisen aufgezeigt werden.
