A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly Will Warner

“A Fly-by-Wire Architecture for Multi-Threaded Windows Apps” demonstrates the power and beauty of multi-threading—and its necessity in complex applications that perform lengthy processing or that wait for stimulus from outside of the program. The book presents an architecture for structuring multi-threaded Windows applications, brings readers to an understanding of these techniques, and prepares them to employ the concepts in their own Windows apps. The architecture is “fly-by-wire” because it is modeled after systems whose components are interconnected not directly but by a network over which the components communicate using messages. The author makes use of the fly-by-wire organization within Windows applications themselves. Thus structured, a program comprises nuggets of functionality, which do most of their work in child-threads and communicate by messages over a “logical bus,” all within the program itself. Borrowing another feature of digital circuitry, the author equips his programs with a software clock; its ticks drive processing, synchronizing activity and communication among the various threads. To illustrate the concepts, the book presents the design and source code for a completely functioning Windows application to control a hypothetical robot, and makes the source code available on a companion website. Visit www.flybywirewinapps.com to learn more. The author draws on his 35 years in the industry to make potentially controversial observations about software development process, aimed at recognizing the difference between theory and practice, and incorporates his views on what constitutes elegance in software design.

From reader reviews:

Gustavo Cyr:

Now a day people who Living in the era wherever everything reachable by interact with the internet and the resources within it can be true or not call for people to be aware of each information they get. How a lot more to be smart in getting any information nowadays? Of course the reply is reading a book. Reading through a book can help individuals out of this uncertainty Information particularly this A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly book as this book offers you rich facts and knowledge. Of course the knowledge in this book hundred per-cent guarantees there is no doubt in it you know.

Vivian Nava:

This A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly is great guide for you because the content that is certainly full of information for you who have always deal with world and still have to make decision every minute. This book reveal it facts accurately using great plan word or we can point out no rambling sentences within it. So if you are read it hurriedly you can have whole info in it. Doesn't mean it only provides straight forward sentences but difficult core information with beautiful delivering sentences. Having A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly in your hand like obtaining the world in your arm, data in it is not ridiculous one. We can say that no e-book that offer you world with ten or fifteen tiny right but this reserve already do that. So , this is good reading book. Hi Mr. and Mrs. busy do you still doubt that?

Joel Connolly:

On this era which is the greater individual or who has ability in doing something more are more treasured than other. Do you want to become one of it? It is just simple strategy to have that. What you must do is just spending your time almost no but quite enough to enjoy a look at some books. One of many books in the top checklist in your reading list is usually A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly. This book and that is qualified as The Hungry Inclines can get you closer in becoming precious person. By looking up and review this publication you can get many advantages.

Robert Stewart:

What is your hobby? Have you heard in which question when you got pupils? We believe that that question was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. And you know that little person similar to reading or as reading become their hobby. You must know that reading is very important and also book as to be the matter. Book is important thing to include you knowledge, except your own teacher or lecturer. You get good news or update regarding something by book. Many kinds of books

that can you take to be your object. One of them is A Fly-by-Wire Architecture for Multi-Threaded Windows Apps: How to Write Complex But Reliable Windows Applications Quickly.
