Computer Processing of Remotely-Sensed Images: An Introduction Paul M. Mather, Magaly Koch
This fourth and full colour edition updates and expands a widely-used textbook aimed at advanced undergraduate and postgraduate students taking courses in remote sensing and GIS in Geography, Geology and Earth/Environmental Science departments. Existing material has been brought up to date and new material has been added. In particular, a new chapter, exploring the two-way links between remote sensing and environmental GIS, has been added.

New and updated material includes:

- A website at www.wiley.com/go/mather4 that provides access to an updated and expanded version of the MIPS image processing software for Microsoft Windows, PowerPoint slideshows of the figures from each chapter, and case studies, including full data sets,
- Includes new chapter on Remote Sensing and Environmental GIS that provides insights into the ways in which remotely-sensed data can be used synergistically with other spatial data sets, including hydrogeological and archaeological applications,
- New section on image processing from a computer science perspective presented in a non-technical way, including some remarks on statistics,
- New material on image transforms, including the analysis of temporal change and data fusion techniques,
- New material on image classification including decision trees, support vector machines and independent components analysis, and
- Now in full colour throughout.

This book provides the material required for a single semester course in Environmental Remote Sensing plus additional, more advanced, reading for students specialising in some aspect of the subject. It is written largely in non-technical language yet it provides insights into more advanced topics that some may consider too difficult for a non-mathematician to understand. The case studies available from the website are fully-documented research projects complete with original data sets. For readers who do not have access to commercial image processing software, MIPS provides a licence-free, intuitive and comprehensive alternative.

Marvin Gamez:

The book Computer Processing of Remotely-Sensed Images: An Introduction make one feel enjoy for your spare time. You can utilize to make your capable a lot more increase. Book can to become your best friend when you getting pressure or having big problem using your subject. If you can make studying a book Computer Processing of Remotely-Sensed Images: An Introduction to get your habit, you can get far more advantages, like add your personal capable, increase your knowledge about several or all subjects. You may know everything if you like wide open and read a reserve Computer Processing of Remotely-Sensed Images: An Introduction. Kinds of book are a lot of. It means that, science guide or encyclopedia or other individuals. So , how do you think about this e-book?

Deborah Anderson:

Reading a reserve tends to be new life style on this era globalization. With reading you can get a lot of information that can give you benefit in your life. Together with book everyone in this world can easily share their idea. Ebooks can also inspire a lot of people. A lot of author can inspire their own reader with their story or their experience. Not only the storyplot that share in the textbooks. But also they write about the information about something that you need case in point. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that exist now. The authors these days always try to improve their talent in writing, they also doing some study before they write with their book. One of them is this Computer Processing of Remotely-Sensed Images: An Introduction.

Jimmy Martinez:

Spent a free time for you to be fun activity to accomplish! A lot of people spent their leisure time with their family, or their friends. Usually they accomplishing activity like watching television, gonna beach, or picnic in the park. They actually doing same every week. Do you feel it? Would you like to something different to fill your own free time/ holiday? May be reading a book can be option to fill your cost-free time/ holiday. The first thing that you ask may be what kinds of reserve that you should read. If you want to attempt look for book, may be the reserve untitled Computer Processing of Remotely-Sensed Images: An Introduction can be fine book to read. May be it could be best activity to you.

Zoe Harris:

A lot of people always spent their own free time to vacation as well as go to the outside with them loved ones or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, or playing video games all day long. In order to try to find a new activity here is look different you can read the book. It is really fun for yourself. If you enjoy the book you read you can spent all day long to reading a reserve. The book Computer Processing of Remotely-Sensed Images: An Introduction it is quite good to read. There are a lot of folks that recommended this book. These people were enjoying reading this book. If

you did not have enough space bringing this book you can buy the e-book. You can m0ore quickly to read this book out of your smart phone. The price is not very costly but this book provides high quality.
